

Jason D. Page grew up in the Sierra foothills near Yosemite, about 100 miles east of SPI's office in Lafayette, California. Growing up he was interested in a variety of sports and developed a strong love for the outdoors. After graduating as a civil engineer from Cal Poly San Luis Obispo in 1994, he embarked on his first construction project, installing ground improvement in Vancouver British Columbia. Since then, Jason has been involved in the design and management of many interesting civil engineering projects up and down the West Coast. Typically, these projects have involved unique ground improvement, shoring and/or foundations systems, in difficult access or tricky soil conditions. Away from work Jason enjoys mountain biking, skiing, rock climbing and sailing with family and friends. The Page family currently lives in Martinez, CA, near the historic home of John Muir, one of his childhood heroes.
